PROFESSIONAL SUMMARY

Computer Science undergraduate (6th semester) specializing in cybersecurity, blockchain technology, and full-stack development. Experienced in building production-grade security platforms including AI-powered threat detection, blockchain-based logging, and encrypted file systems. Strong foundation in data structures, algorithms, and machine learning with a track record of completing complex full-stack projects independently.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, JavaScript

Web Development: React, Node.js, Express.js, HTML, CSS, FastAPI, Flask

Databases: SQLite

Cybersecurity & Blockchain: Intrusion Detection Systems, AES-256 Encryption, Ethical Hacking, Solidity, Web3.js, MetaMask, Blockchain Logging

Machine Learning & Data: Scikit-learn, NLP, Data Structures and Algorithms, Power BI

Tools and Platforms: Git, GitHub, VS Code, Unity, Vercel

PROJECTS

Cyber Defense System v3.0

March 2026 - Present

Full-Stack Cybersecurity Platform | FastAPI, React, SQLite, Blockchain, AI

- Designed and developed a full-stack cybersecurity command center combining AI-based threat detection, blockchain-based audit logging, and a real-time Security Operations Center (SOC) dashboard.
- Built a Super Admin console providing full system control over user roles, login activity, attack logs, and blocked IP addresses, supporting role-based access control.
- Implemented a real-time interactive threat map visualizing live attack origins including DDoS, SQL Injection, Port Scans, Brute Force, XSS, and Path Traversal attempts.
- Achieved 94.1% detection accuracy with a 0.99 F1 score and 1.8ms average latency through model performance tuning and analytics dashboards.
- Developed an AI-powered file vault scanner that screens uploads for malware before AES-256 encryption, including entropy analysis and threat scoring.
- Built AES-256 encrypted internal messaging and an admin invite management system for secure team collaboration.

Decentralized Exam Result System (DERS)

Group Project, Course UE23CS3603

Blockchain-Based Academic Records Platform | Solidity, Flask, Web3.js, MetaMask

- Developed a decentralized platform for tamper-proof exam result storage and verification using Solidity smart contracts deployed on a blockchain network.
- Integrated MetaMask wallet authentication with Web3.js for secure, decentralized user access.
- Implemented a Flask backend supporting per-semester subject configuration, elective management, and a complete login and registration system.

Remote Patient Monitoring (RPM) using AR/VR

5th Semester

Healthcare Monitoring System | Unity, AR/VR

- Built an immersive AR/VR application enabling healthcare providers to remotely monitor patient vitals and status in real time.

Spam Email Classification

4th Semester

Machine Learning Email Classifier | Python, scikit-learn, NLP

- Built a machine learning pipeline using natural language processing and classification algorithms to accurately distinguish spam from legitimate emails.

Small Scale Business Management System

3rd Semester

Business Management Application

- Designed and implemented a management system to streamline core business operations for small-scale enterprises.

EDUCATION

B.Tech in Computer Science and Engineering

2023 - Present

GM University, Davangere, Karnataka | CGPA (through 5th Semester): 7.18

CERTIFICATIONS

- Embracing Data Structures and Algorithms for Project Development - GM University (Grade A)
- Fundamentals of Cybersecurity, Stage 1 - GM University (Grade A+)
- Cybersecurity Essentials - Ethical Hacking, Stage 2 - GM University (Grade O)
- Ethical Hacking - Udemy
- Power BI Workshop
- Mobile App Development (Beginner) - GM University, In Progress

ACHIEVEMENTS

- 2nd Place, Data Hunt Competition - GM University
- 3rd Place, Jnana Yuddha General Knowledge Competition - GM University
- Participant, Google DevFest

LANGUAGES

Fluent: Hindi, English, Kannada

Conversational: Marathi, Konkani
